SUMMARY

Master of Data Science candidate at RMIT University, graduating December 2026, with hands-on experience analysing large structured datasets, identifying operational trends, and validating data integrity using Python, SQL, and Power BI. Skilled in producing clear written reports and dashboards using Excel, Word, PowerPoint, and Teams to support data driven decision making. Strong organisational skills, with a proven ability to manage multiple tasks, adapt to new systems, and contribute effectively within collaborative project teams. Seeking to apply analytical skills and academic training to real world data and systems support projects within the public sector.

SKILLS

Programming: Python, SQL, R

Data tools: Power BI, Tableau, Excel, MongoDB

Office tools: Microsoft Word, PowerPoint, Excel, Teams

Data analysis: Trend Analysis, Data Validation, Data Integrity, Reporting, EDA

Soft skills: Communication, Organisation, Adaptability, Teamwork, Problem Solving

EDUCATION

Master of Data Science, RMIT University, Melbourne

Feb 2025 - Dec 2026

GPA: 3.4/4.0. Coursework: Machine Learning, Data Analytics, Statistical Modelling, Business Intelligence, Artificial Intelligence

Bachelor of Technology in Information Technology

Aug 2016 - Nov 2020

Jeppiaar Institute of Technology, India

GPA: 3.12/4.0. Majors: Computer Systems, Information Systems

EXPERIENCE

Machine Learning Engineer Intern, Focus Bear

Apr 2026 - Present

Melbourne, VIC

- Engineered an NLP based behavioural feature classifier (Random Forest) on 1,340+ user session observations to detect digital distraction patterns, achieving $R^2 = 0.79$, supporting data driven product recommendations across the production user base.
- Analysed session telemetry, including tab switch frequency, tab duration, idle time, and focus alignment score, to identify behavioural trends and validate data integrity, extracting 4 statistically significant features that reduced model complexity for reporting.
- Benchmarked 7 regression architectures across 60+ hyperparameter configurations using 5-fold cross-validation, and selected ExtraTrees ($R^2 = 0.80$, $MAE = 0.060$), achieving a 4.4 times performance gain over the linear baseline.
- Built an automated analytics system using GPT-4o Vision to classify focus states and compute a composite 0 to 1 Focus Score, merging the outputs with internal session data through timestamp alignment to deliver the platform's first quantitative productivity metric.
- Collaborated with product managers and engineers, translating data analysis findings into written summaries and actionable recommendations for cross functional teams.

Data Analyst, Smartfusion Corporate Solutions Pvt Ltd

Feb 2024 - Feb 2025

Chennai, India

- Analysed 1M+ operational records using Python and SQL to identify trends and bottlenecks across five business units, supporting a process redesign that reduced manual processing overhead by 30%.
- Built automated data validation and cleaning pipelines in Python, improving reporting accuracy by 20% and strengthening data integrity across operational dashboards.

- Conducted exploratory data analysis and statistical pattern reviews to identify trends in underperforming KPIs, producing structured written reports for leadership.
- Built interactive Power BI dashboards monitoring real time KPIs, reducing decision making delays and standardising performance reporting across business units.
- Provided guidance to junior analysts on data analysis methods and reporting tools, supporting a collaborative and organised team environment.

Client Partner, Access Healthcare

Nov 2021 - Apr 2023

Chennai, India

- Analysed large scale healthcare claims datasets to identify approval bottlenecks, and implemented structured tracking workflows that increased claim approval rates by 40%.
- Built Power BI performance dashboards monitoring processing delays and throughput KPIs, reducing issue detection lag and supporting standardised reporting across client accounts.
- Partnered with cross functional teams to standardise data submission protocols, improving data quality and reducing rejection rates.

Junior Consultant (Internship), Tasksent

Oct 2020 - Nov 2020

Chennai, India

- Analysed campaign and audience data to support digital marketing strategies, translating findings into clear recommendations for the client team.
- Improved website organic traffic by 25% through SEO optimisation and structured performance tracking.

ACADEMIC PROJECTS

Attention Score Prediction via Tab Velocity (Focus Bear)

Python, OpenCV, GPT-4o Vision, Scikit-learn

- Designed an end to end data pipeline synchronising dual video streams, and applied GPT-4o Vision to classify focus states and compute a 0 to 1 productivity metric.
- Built and tuned an ensemble regression pipeline using Random Forest, ExtraTrees, and Gradient Boosting with GridSearchCV to deliver objective analytics metrics.

Credit Card Fraud Detection Using GANs

Python, TensorFlow, Scikit-learn, Pandas

- Engineered a GAN based synthetic data augmentation pipeline for anomaly detection on a 284K transaction dataset with a 0.17% fraud rate, achieving F1 = 0.805 and 99.94% accuracy.
- Benchmarked augmentation strategies, including SMOTE, ADASYN, and Bayesian optimisation, and found that the GAN approach delivered 11.3% higher precision than SMOTE.

InfoMate, an AI Powered University Information Chatbot

Python, GPT-4o, Streamlit, MongoDB

- Built an NLP powered chatbot on 10,000+ structured and unstructured documents using GPT-4o embeddings, and validated it with 10 domain expert faculty members across 3 iterative improvement cycles.
- Deployed a production ready Streamlit web application with MongoDB backed session management, supporting real time multi turn conversations.

CERTIFICATIONS AND VOLUNTEERING

- Deloitte Australia, Data Analytics Job Simulation (Forage): Applied data analysis and reporting techniques to operational decision making scenarios.
- Commonwealth Bank, Introduction to Data Science Job Simulation (Forage): Developed data analysis and visualisation solutions for financial decision making contexts.
- Event Volunteer, PMI Melbourne Chapter (2025 to Present): Supporting project management community events and providing peer mentorship.
- Event Crew, RMIT Open Day (2025): Guided prospective students through campus and program information sessions.
